

Virtual Asset

Blockchain technology, which enables trust-based transactions among participants without intermediaries through a decentralized system, has undergone astonishing advancement. Among recent developments in legalizing the virtual asset industry, a reporting obligation for virtual asset service providers has been introduced under the Act on Reporting and Using Specified Financial Transaction Information, and active discussions on the enactment of the Virtual Asset Business Act are underway.

Shin & Kim's virtual asset practice group provides a one-stop legal service for companies engaged in the virtual asset businesses. In particular, the team's experts have been offering advisory services since 2016, starting with cross-border remittances using Bitcoin. From 2017 to the present, the team has handled diverse and in-depth matters, including Initial Coin Offerings (ICOs), the establishment of virtual asset exchanges, reporting obligations for virtual asset service providers, internal compliance audits, and consultation on related regulations, including government investigations. They have also been actively involved in the legal aspects of various issues, ranging from virtual asset-based cross-border remittances, crypto-fund investments, decentralized finance (De-fi), to criminal matters such as hacking and fraud involving virtual assets. Additionally, through activities outside of the firm, such as media articles, lectures, broadcasts, and external seminars, the team has been dedicated to enhancing the legal understanding of industry participants and contributing to the establishment of government regulatory directions.

Shin & Kim's virtual asset practice stands as a beacon of unparalleled excellence in the dynamic realm of the blockchain industry. With rich in-depth experience and expertise, we offer not just legal services but a transformative legal journey that distinguishes us from other law firms.

Key Services
